1 Area of applicability

These safety instructions apply to the sensors of type series VEGACAP CP6*.EZ***Z***.

If the VEGACAP CP6*.EZ***Z*** sensors are installed and operated in hazardous areas, the general Ex mounting instructions and these safety instructions must be observed.

2 General information

The sensors VEGACAP CP6*.EZ***Z*** are suitable for use in hazardous atmospheres for applications requiring instruments of category 3G.

If the VEGACAP CP6*.EZ***Z*** sensors are installed and operated in hazardous areas, the general Ex mounting instructions and these safety instructions must be observed.

The operating instructions as well as the valid Ex mounting regulations and standards for electrical equipment must be observed.

The installation of explosion-protected systems must always be carried out by qualified personnel.

3 Technical data

3.1 Electrical data

Version VEGACAP CP6*.EZ***Z***

Power supply and signal circuit: (terminal 1[+], 2[-]) U = 9 ... 32 V DC (supply via the signal conditioning instrument)

Power supply

Suitable signal conditioning instruments: VEGATOR 521, 527, 620, 621, 622

4 Application conditions

The max. permissible ambient temperatures depending on the temperature class and the process temperature can be found in the following tables.

4.1 Process and ambient temperatures

Version VEGACAL CP62.EZA/C**Z***

Temperature class	Max. permissible process temperature	Max. permissible ambient temperature
T5	+100 °C	+53 °C
T4	+135 °C	+80 °C

T1	+150 °C	+80 °C

The permissible operating pressures are specified in the operating instructions manual.

When using an indicating and adjustment module, the max. ambient temperature is limited to +70 °C.

5 Opening the housing

The electronics compartment may be opened to adjust the measuring range.

If the instrument is operated with opened cover and the measuring range selection switch is activated, please make sure that there is no hazardous atmosphere.

The cover has to be screwed tightly after connection and adjustment.

6 Impact and friction sparks

The VEGACAP CP6*.EZ***Z*** in aluminium and titanium version must be mounted in such a way that sparks from impact and friction between aluminium/Titanium and steel (except stainless steel, if the presence of rust particles can be excluded) cannot occur.

7 Material resistance

For applications requiring instruments of category 3G the VEGACAP CP6*.EZ***Z*** should only be used in media against which the wetted materials are sufficiently resistant.

8 Grounding

The VEGACAP CP6*.EZ***Z*** have to be grounded electrostatically e.g. via the ground terminal.

9 Protection against static electricity (X-identification)

The VEGACAP CP6*.EZ***Z*** in the version with chargeable plastic parts, such as e.g. metal housing with inspection window, are provided with a caution label on the housing referring to the safety measures that must be taken in case of electrostatic charges during operation.

Caution: Plastic parts! Danger of static charge!

- Avoid friction
- No dry cleaning
- Do not mount in pneumatic filling stream

10 Cable entries

A tight and tension-free cable entry must be provided. The outer diameter of the connection cable must be adapted to the cable gland. The pressure screw has to be tightened carefully.

Unused openings for cable entries have to be sealed tightly.

11 Selection of the cables and wires (X-identification)

In case of nominal rating temperatures exceeding 70 °C may occur at the cable entry. Please make sure that the cables and wires used are suitable for these temperatures.

12 Special features (X identification)

Option:

- Cover with inspection glass corresponds to the "low" mechanical strain level.
- The instrument must be installed and operated in a way that ensures there is no danger of ignition from electrostatic charging.
- The seal between lower part of the housing and cover must be correctly in place and in faultless condition. The cover must be tightened carefully.
- Unused openings for cable entries have to be sealed tightly.
- Mount VEGACAL in a way that adequately ensures that the sensor will not touch the vessel wall due to the movements of other vessel installations and flow conditions in the vessel.
