

Fisher™ V500 Rotary Globe Control Valve

The Fisher V500 eccentric plug rotary control valve controls erosive, coking, and other hard-to-handle fluids, providing either throttling or on/off operation. The flanged valve features streamlined flow passages, rugged metal trim components, and a self-centering seat ring (figures 1 and 2). With these components, the V500 rotary control valve combines globe valve ruggedness with the efficiency of a rotary valve. Matched with a Fisher power or manual actuator, the V500 rotary control valve dependably controls fluids in many process industries.

Unless otherwise noted, all NACE references are to NACE MR0175-2002. Contact your [Emerson Process Management sales office](#) for additional information on NACE MR0175-2003, NACE MR0175/ISO 15156, and NACE MR0103.

Fisher V500 Flanged Rotary Control Valve with 2052 Actuator and FIELDVUE™ DVC6200 Digital Valve Controller

Features

- **Easy Installation** -- Integral valve body flanges mate with many different classes of pipeline flanges, satisfying a variety of piping requirements. Flanges help to eliminate exposed line flange bolting, shorten alignment and installation time, and promote secure valve installations and piping integrity.
- **Operational Versatility** -- Self-centering seat ring and rugged plug allow forward or reverse flow with tight shutoff in either flow direction. Reverse flow direction helps move downstream turbulence away from shutoff surfaces. Full 90-degree rotation removes valve plug from flowstream, helping to reduce plug wear. Seat ring and retainer are available in full and restricted port constructions, and can easily be changed if capacity requirements change.
- **Resists Damage from Erosive Flow** -- Valve assembly is specifically designed to combat the process of erosion. Streamlined flow passages, rugged components, and a wide choice of erosion-resistant trim materials all promote long, dependable service life in erosive applications.
- **Long Seat Life** -- Path of eccentric plug (figure 4) minimizes contact with seat ring when opening, reducing seat wear and friction. When the valve plug rotates into the seat ring, a self-lapping action occurs, improving the fit between shutoff surfaces. Full-port, S31600, R30006, or VTC seat ring has two shutoff surfaces and can be easily reversed, reducing downtime.
- **Furnace Feed Design** -- Specially selected trim materials and body coatings help to withstand oil sands, furnace feed, and other highly erosive applications.

(continued on page 3)

Specifications

Available Configuration

Flanged valve assembly (NPS 3 through 8 only) with reversible⁽¹⁾ metal or VTC (ceramic) seat ring and splined valve shaft

Valve Sizes

■ NPS 1, ■ 1-1/2, ■ 2, ■ 3, ■ 4, ■ 6, and ■ 8
DN sizes are also available (see tables 1 and 2).

End Connection Style and Rating

■ Raised-face flanges or ■ ring-type joint flanges (ASME B16.5). Valves with EN PN10 through PN100 flanges also available. (See tables 1 and 2 for ASME and EN availability by valve size.)

Maximum Inlet Pressure⁽²⁾

Consistent with applicable ASME or EN flange ratings

Maximum Pressure Drops⁽²⁾

See tables 5, 6, 7, 8 and 9

Shutoff Classification

Class IV per ANSI/FCI 70-2 and IEC 60534-4, (0.01% of valve capacity at full travel) for either flow direction. Leak rates for full and restricted port valves are based on full port valve capacities. Reduced port valves seat at the full port diameter.

Construction Materials

See table 4 for individual parts and table 3 for trim combinations

Material Temperature Capability⁽²⁾

See table 4

Flow Characteristic

Modified linear

Flow Direction

Reverse flow (standard): Past valve plug and through seat ring; tends to close the valve; recommended for erosive service
Forward flow: Through seat ring and past valve plug; tends to open the valve

Flow Coefficients

See Fisher Catalog 12

Flow Coefficient Ratio⁽³⁾

See Fisher Catalog 12

Noise Levels

See Fisher Catalog 12

Actuator Mounting

■ Right-hand or ■ left-hand as viewed from the upstream side of the valve.

Mounting position depends on the desired open valve plug position and flow direction required by operating conditions. For more information, see the Installation section.

Valve Plug Rotation

Counterclockwise to close (when viewed from actuator side of valve) through 90 degrees of plug rotation

Valve/Actuator Action

With diaphragm or piston rotary actuator, field-reversible between

■ push-down-to-close (extending actuator rod closes valve) and

■ push-down-to-open (extending actuator rod opens valve)

Packing Constructions

■ **PTFE V-Ring:** With one carbon-filled PTFE conductive packing ring in single, double, or leak-off arrangements, -46 to 232°C (-50 to 450°F)

■ **PTFE/Bound-Composition:** With one graphited composition conductive packing ring in single, double, or leak-off arrangements, -46 to 232°C (-50 to 450°F)

■ **Graphite Ribbon Packing Rings:** In single, double, or leak-off arrangements, -198 to 538°C (-325 to 1000°F)

■ **ENVIRO-SEAL™ PTFE:** -46 to 232°C (-50 to 450°F) (for 100 ppm service requirements)

■ **ENVIRO-SEAL Graphite:** -7 to 316°C (20 to 600°F) (for 100 ppm service requirements). This packing arrangement can be used to 371°C (700°F) for non-environmental service.

(continued)

Specifications (continued)

Shaft Diameters

See figure 5

Dimensions and Approximate Weights

See figure 5; face-to-face dimensions conform to ISA S75.04 and IEC 60534-3-2

Options

■ Restricted trim (retainer and seat ring) for low-flow applications, ■ sealed bearing constructions, ■ purged bearings, ■ tungsten carbide trim option, ■ flushing connections, ■ chrome carbide valve body coating, ■ ENVIRO-SEAL packing system; see figure 3 and [bulletin 59.3:041, ENVIRO-SEAL Packing Systems for Rotary Valves \(D101638X012\)](#) for more information

1. The reversible seat is not available in every trim material. Consult your [Emerson Process Management sales office](#).
2. The pressure or temperature limits in the referenced tables or figures, and in any applicable code limitation, should not be exceeded.
3. Ratio of maximum flow coefficient to minimum usable flow coefficient. May also be called rangeability.

Features (continued)

- **Simple Assembly and Maintenance** -- No special orientation, precision clamping or repetitive centering of valve plug and seat ring is required when tightening the retainer, promoting accurate alignment and easy assembly.
- **Improved Environmental Capabilities** -- The optional ENVIRO-SEAL packing systems are designed with very smooth shaft surfaces and live loading to provide improved sealing. The seal of the ENVIRO-SEAL system can restrict emissions to less than the EPA (Environmental Protection Agency) limit of 100 ppm (parts per million).
- **Sour Service Capability** -- Trim and bolting materials are available for applications handling sour service. These materials comply with the requirements of NACE MR0175-2002. Contact your [Emerson Process Management sales office](#) for additional information.
- **Rugged Construction** -- Durable, solid metal or VTC seat ring and valve plug shutoff tightly without deforming plug arms or employing thin ball seals. Oversized shaft diameters and rugged trim parts allow high pressure drops. Tungsten carbide is also available for erosive service.
- **Reliable Performance** -- Seat ring design (figure 2) self-centers, self-laps, and dynamically aligns with plug, giving excellent cycle life. Sealed metal bearings (see figure 1) help prevent particle buildup and valve shaft seizure in erosive applications.
- **Choice of Construction Materials** -- Plug, seat ring, and retainer are available in four levels of hardness for selection of erosion resistance.
- **Optional Alloy 6 Seat Ledge Insert Available** -- Protects seat and valve body from high-velocity erosive flows and eases repair. Available for NPS 2-8.

1. Trim 3 for NPS 2 through 8 stainless steel bodies is limited to 600°F.
2. European Sourcing Only.
3. European sources supply CF3M in lieu of CF8M.
4. Includes an S20910 SST shaft for NPS 1, 1-1/2, and 2.
5. Use trim 4S when sour service construction is required for compliance to NACE MR0175-2002.
6. VTC trim is not compatible with water and steam above 180°C (360°F).

Table 11. Actuator Mounting Selections, with Action and Open Plug Position Options

MOUNTING	ACTION ⁽¹⁾	OPEN PLUG POSITION	
		Forward Flow	Reverse Flow
Left-hand	PDTC	Below shaft ⁽²⁾	Above shaft
	PDTO	Below shaft ⁽²⁾	Above shaft
Right-hand	PDTC	Above shaft	Below shaft ⁽²⁾
	PDTO	Above shaft	Below shaft ⁽²⁾

1. PDTC—Push-down-to-close (extending actuator rod closes valve)
PDTO—Push-down-to-open (extending actuator rod opens valve).
2. Consult your Emerson Process Management sales office for compatibility with process fluid. Particulate can cause the valve to stick if the plug is rotated below the shaft.

information under each specification and in the referenced tables.

Actuator and Accessory Information

Refer to the specific actuator and accessory bulletins for required ordering information.

Installation

The V500 control valve may be installed in any position. However, for best shutoff performance, a position with the shaft horizontal is recommended.

The control valve may be installed in forward or reverse flow direction. Forward flow (through the seat ring and past the plug) tends to open the valve; reverse flow (past the plug and through the seat ring) tends to close the valve. The reverse flow direction is recommended for erosive applications.

Specific operating conditions may require a specific combination of push-down-to-close or -open actuator motion and open valve plug position above or below the shaft. To satisfy specific operating requirements, the complete control valve package (valve and actuator) can be assembled and installed in different ways, providing eight options for actuator motion and open plug position.

Table 11 and the appropriate actuator bulletin describe possible assembly and installation options. For assistance in selecting the appropriate combination of actuator action and open valve position, consult your [Emerson Process Management sales office](#).

Dimensions are shown in figure 5.

Valve Information

To determine the required valve ordering information, refer to the Specifications table. Review the
