A TOUCH OF GENIUS

GORILLA® GLASS

By using Gorilla® Glass 2, we ensure the screen withstands knocks, falls and scratches. It provides better touch responsiveness and brighter images without sacrificing damage resistance.

WORLD'S FIRST 7" GLOVE-ENABLED TOUCH-SCREEN WITH SUPERB SENSITIVITY

The new Getac Z710-Ex brings the world's first capacitive touch-screen, with Getac proprietary LumiBond™ technology, Gorilla® Glass, capacitive touch sensor and LED panel with OCR (Optical Clear Resin), which provide unprecedented touch sensitivity even with gloves on!

REDEFINE TECHNOLOGY IN THE FIELD

The connectivity and communication capabilities of the Z710-Ex boost productivity by allowing unprecedented mobility across field service, field sales and asset diagnostic tasks. The enhanced 10-hour battery life extends operating time without the need for recharging. The Z710-Ex is changing the game by bringing a touch of genius into field applications.

GRAPHICS INTENSE APPLICATIONS

With its sunlight reflective 7 inch display, the Z710-Ex offers the best qualification for graphics intense applications. Documents can be viewed with ease, enabling users to access relevant data such as maintenance applications.

While servicing a piece of equipment, maintenance sheets or circuitry documentation can be downloaded instantly to give the operator all relevant information to carry out the service. Enabling the user to get more done in less time. In case a damaged part is found, it can be documented with a built-in 5 megapixel camera, which allows the image to be transmitted via WWAN for instant analyses for a quick response.

In production facilities – e.g. in the chemical industry – accuracy of data is of great importance. Errors can be costly and even dangerous. This, is where the Z710-Ex can be a very helpful tool. It helps to identify individual substances within a container. A check against a product's formula verifies accurate consistencies, which ensures safety, product quality and avoids expensive errors.

WHAT IS THE DIFFERENCE BETWEEN ZONE 1 AND ZONE 2?

ATEX Directive 94/9/EC defines **Zone 2** as an area in which an **explosive atmosphere** (a mixture of air and flammable gases, steam or mist) **is not to be expected under normal circumstances or just for a short period of time**. Just one brief hazardous situation per year is enough to rate an area Zone 2. Zone 2 devices provide required ruggedness and fall protection, which ensures safety of use during normal operations without technical failures such as battery short.

An area must be classified **Zone 1** if an **explosive atmosphere can develop occasionally during normal operations**. In that case only Zone 1 certified product must be used, which even in exceptional situations ensures necessary safety in case of failure.
